

Avigilon H5A Thermal Camera Line Firmware Release Notes

Version 4.66.0.26 – Released September 14, 2023

New Features

- “No Smart Analytics” mode has been renamed to “No Video Analytics”

Issues Fixed

- Resolves internal manufacturing issues
- Resolves an issue that can potentially cause incorrect URL redirections
- Resolves an issue that can potentially cause the RTSP stream to result in an error when the edge rotation value is changed while the camera is tiling
- Resolves an issue that potentially prevents analytics events from displaying properly on ACC when the image stream is rotated from the WebUI

Version 4.62.0.8 – Released July 10, 2023

New Features

- A new option titled “No Smart Analytics” is available through the WebUI that allows the disabling of Smart Analytics functions (basic pixel motion detection will not be disabled)
- Radiometric metadata is now available within ONVIF XML metadata streams
- Color palette (White-Hot, Black-Hot, and Rainbow) options can now be selected from the WebUI

Issues Fixed

- Fixes internal manufacturing issues & features
- Resolves an issue that prevented the logout of WebUI users when accessed from an iOS device

Version 4.54.0.26 – Released March 16, 2023

New Features

- Video Analytics Library updated to version 16.4.10

Issues Fixed

- Fixes internal manufacturing issues & features
- Fixes an issue that potentially could have caused rules triggered in the camera’s CCT to not reflect in ACC
- Fixes an issue that potentially could have caused the camera’s LED not to indicate power on until the camera was fully booted

Version 4.54.0.22 – Released February 10, 2023

- Initial firmware release for this camera line
