

# OMNILERT GUN DETECT & AVIGILON

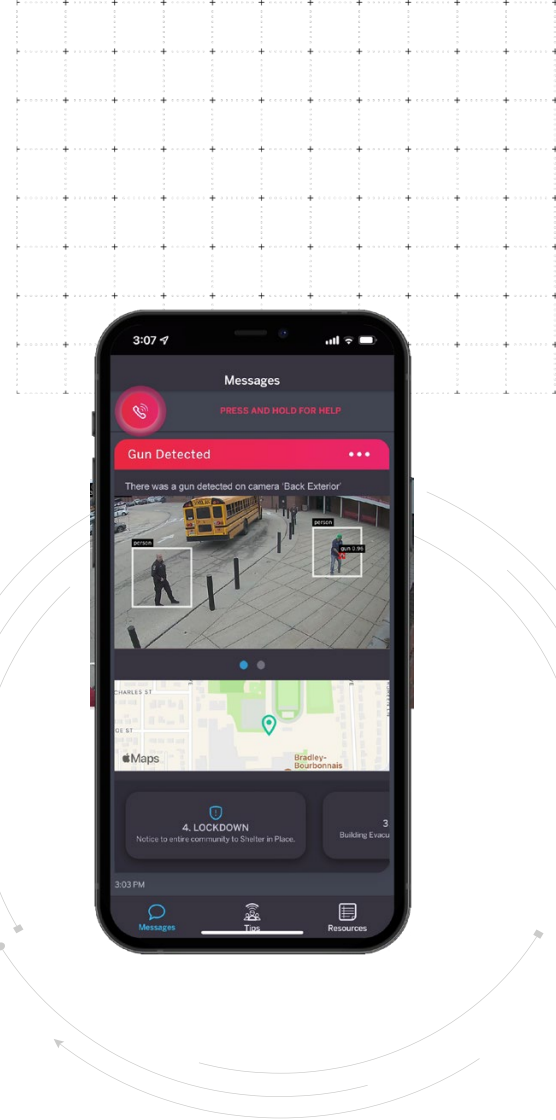

## Save Lives with Early Gun Detection and an Automated, Rapid Response

Omnilert Gun Detect is an AI-powered visual gun detection software that delivers reliable, 24/7 monitoring of gun threats using existing security cameras. As the only gun detection solution with proven automation and emergency notification capabilities. Gun Detect maximizes every second to keep your people safe.

## Powerful Response Automation and Emergency Notifications

Visual gun detection technology leverages advanced AI software to recognize firearms. The always-on, automated software monitors camera feeds 24/7. The AI accurately identifies guns across real-world environments — indoors and outside, daytime and night.

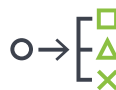

Weapons are identified within a second and are verified by certified professionals across three Omnilert monitoring centers or within a customer's security operations center. Once verified, a cascade of activities can be activated, such as: notifying police, locking doors, sounding alarms and alerting anyone in harm's way.

24x7 AI-powered monitoring with human verification by certified professionals

Trigger integrated systems, like VMS, access control and others, to perform response actions.

Dispatch police and/or security teams, armed with photos, video and rich information to improve their response and protect lives

Broadcast warnings and send alerts through a multitude of systems to warn your people

Deliver continual updates to first responders as the suspect moves by cameras throughout facilities

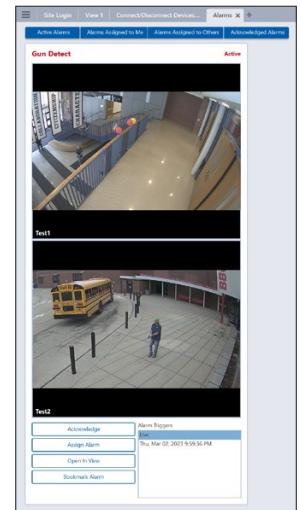

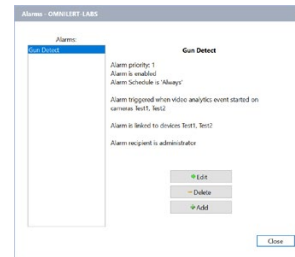

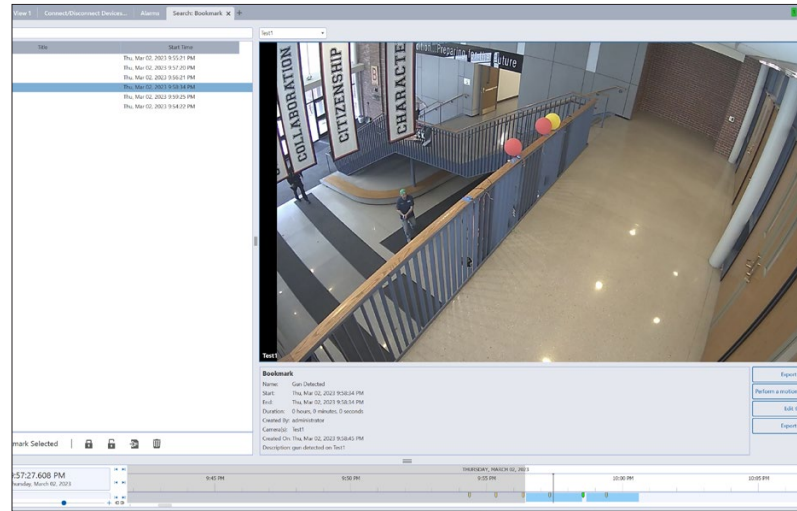

## AVIGILON INTEGRATION

# Extending Customer Investments

Omnilert is built on an open platform, designed for broad integration to support existing workflows and customer investments. When integrated with Avigilon Control Center (ACC), the result is an end-to-end solution that encompasses detection, notification, and incident management.

Omnilert and ACC can help manage the workflow of the incident, bringing the right information to you so that you can take action to help ensure gun threats do not go unnoticed. Integration features include:

- Camera import directly from ACC
- Selectable Bookmarking of cameras and/or Alarming
- Integration with Omnilert Monitoring for human verification
