

TELDIO EDGE GATEWAY & AVIGILON

Automatically Trigger Actions Based on Real-Time Radio Tracking and Critical Event Monitoring within Avigilon Unity Video

Teldio Edge Gateway Avigilon Unity Video Integration

The Teldio Edge Gateway's Avigilon Unity Video integration offers a bi-directional connection between Unity Video alarms and Teldio Edge Gateway events. It leverages the powerful features and functionalities of both products to automatically trigger video actions within Avigilon Unity Video based on real-time radio location tracking and external events via Teldio Edge Gateway.

REAL-TIME LOCATION TRACKING

Location, movement and emergency from a two-way radio fleet can trigger video actions such as PTZ, Zoom, and tagging to connect and automate workflows based on the changing location of your two-way radios.

EXTEND VIDEO ANALYTICS

Leverage deeper insights and actionable intelligence from integrated data arriving from systems connected via Teldio Edge Gateway, to find data faster and with more context by overlay of external data into your video system.

SIMPLIFIED ALARM MANAGEMENT

Eliminate the frustration of toggling between different applications across many screens and access all the information you need in one, centralized location; Avigilon Unity Video.

BILATERAL COMMUNICATION

Teldio Edge Gateway seamlessly integrates into Unity Video systems and connects many devices, protocols, and industrial and enterprise systems. If you have specific needs we can add to our ecosystem of modules to satisfy your customer needs.

CRITICAL EVENT MONITORING

Important events from industrial and enterprise systems, delivered through Teldio Edge Gateway, automatically trigger Unity Video camera movement, video bookmarking, tagging and overlay of specific messages onto video, providing deeper real-time visibility.

DESIGNATED AREA MONITORING

Specific physical area (indoor and outdoor) monitoring detected by Unity Video system analytics can trigger actions into connected systems to inform, alarm and provide automation between video, two-way radios and other systems maximizing value to end customers.

How the Teldio Edge Gateway and Avigilon Seamlessly Integrate

Increase Worker Safety: Real-time location tracking and monitoring of personnel, vehicles, and assets enables organizations to respond swiftly to emergencies and enhance overall safety measures.

Reduce Operational Costs: Increase cost savings by optimizing resource allocation and decreasing response times to reduce expenses due to downtime, delays, and inefficient processes.

Automate Legacy Systems: Seamlessly integrate into your existing legacy systems like fire alarm panels and manufacturing equipment, transforming outdated infrastructures into responsive components connected to your surveillance system.

Real-Time Radio Tracking, Messaging and Alarm Management

The addition of **Teldio TruFleet** enables precise two-way radio location tracking for both indoor and outdoor environments, real-time messaging capabilities, and automated alarm management.

Teldio Edge Gateway and Avigilon Integration Details

Supported Compatible Versions:

- Avigilon Control Center, version 7.10.0.18 or higher
- Avigilon Web Endpoint Service, version 7.10.0.18 or higher
- Teldio Edge Gateway

Availability:

- USA & Canada
